## Product highlights

### Real Flat Blackline S

Philips TV picture tube with invar mask gives less deformation and therefore can provide 80% more contrast than conventional picture tubes for brilliant colours and minimal reflections, even when viewing in daylight. This Real Flat tube is from the latest generation of tubes where the tube face is truly Flat. The advantages of this lie in appearance, wider viewing angle, and in bringing the picture nearer to the front of the glass for less distortion.

### 100Hz Digital Scan

Conventional Televisions scan the picture at 50 times per second (50 Hertz). This Frequency can be detected by the human eye in the form of a flickering picture. 100 Hertz sets scan the picture at 100 times per second eliminating the overall area flicker.

### Digital Natural Motion

Philips 100hz technology produces the most stable pictures free from flickering. In our top sets this is allied to Natural Motion which solves the problem of objects juddering or losing shape when they move fast across the screen. Movements become smooth and natural.

### Digital CrystalClear

A unique package of picture innovations including combfilter, scavem, and dynamic contrast adjustment giving natural colours, high contrast and high level of details. In Digital Crystal Clear the contrast is assessed 50 times per second to optimise the picture further.

### Full Active Control

The tv automatically analyses the incoming signal and adjust the key picture parameters of noise, sharpness, colour, contrast and format giving the best possible at all times. In addition the tv has an ambient light sensor and adjusts the picture according to how much light is in the room.

### Dolby 3D Surround

Using Dolby processing to create cinema surround without cables or rear speakers.

### 1200 Page Easytext

Extremely fast access to many text pages and the ability to scroll through subpages with no wait.

### Teletext Dual Screen

Shows a picture and text side by side from the same channel.
